

Grid

Assignment

1.what is the grid?

A framework of spaced bars that are parallel to or cross each other. 2 a network of lines that cross each other to form a series of squares or rectangles. 3 a network of cables or pipes for distributing power, especially high-voltage electricity.

2.What is the difference between Flex and grid?

The basic difference between CSS grid layout and CSS flexbox layout is that flexbox was designed for layout in one dimension - either a row or a column. Grid was designed for two-dimensional layout - rows, and columns at the same time.

3.How can you define rows and columns for your grid?

We define rows and columns on our grid with the grid-template-rows and grid-template-columns properties. These define grid tracks. A grid track is the space between any two adjacent lines on the grid. The image below shows a highlighted track – this is the first-row track in our grid.

4.List any two properties of the grid item and grid container.

By default, the grid items will start at the top-left of the container.

- justify-items. justify-items is used to justify the grid items along the row axis. ...
- align-items. align-items is used to align the grid items along the column axis. ...
- justify-content. ...
- align-content.
