More on CSS

Assignment

1.Why is it called a pseudo-class ?

CSS pseudo-classes are used to add styles to selectors, but only when those selectors meet certain conditions. A pseudo class is expressed by adding a colon (:) after a selector in CSS, followed by a pseudo-class such as "hover", "focus", or "active", like this: a:hover { /* your style here */ }.

2.What are gradients in CSS ?

CSS gradients let you display smooth transitions between two or more specified colors. CSS defines three types of gradients: Linear Gradients (goes down/up/left/right/diagonally) Radial Gradients (defined by their center).

3.What are different types of transitions in CSS ?

A transition occurs when a CSS property changes from one value to another value over a period of time. You can create CSS Transitions with the transition property:

.selector { transition: property duration transition-timing-function delay; }

CSS Transitions

- transition.
- transition-delay.
- transition-duration.
- transition-property.
- transition-timing-function.
